

Action plan based on the students' feedback received in the 2nd semester of the 2023/2024 academic year

Department: Genetics, Cell- and Immunobiology

Faculty: ED_ FOKOGEN240_1A

Thank you to the students and OMHV staff for their dedicated efforts. Your evaluations play a crucial role in enhancing the quality of our teaching.

Our feedback on general comments by the students:

The questionnaire was submitted by 63.01% of the students, and only two comment was received.

One: "useless course"

Other: "...best class ever attended...:"

In the assessment of the lectures, the subject was all rated below the faculty average. The practicals, on the other hand, did not deviate from the average.

This is interesting because the students did not attend the non-mandatory lectures, but did attend the mandatory exercises.

Weaknesses: Based on K3, the Department performed worse than the average of the Faculty, only 30% of the students attended the lectures.

Proposal: To increase the attendance of the lectures, the Institute will ask questions to collect points during the classes, as a bonus.

In addition to the classic examples of human genetics, we plan to present more dentist-specific examples. We strive for practice-oriented education. The video recordings of the lectures are made available to the students.

Date: 30. 09. 2024
