

Action Plan

Based on the OMHV Data for the 1st Semester of the 2024/2025 Academic Year

Organizational Unit: **Department of Genetics, Cell- and Immunobiology**

Faculty: **Faculty of Pharmacy (EPH)**

Course: **Cell Biology GYKGEN331E1_1A**

General Feedback:

We thank the students for their feedback and appreciate the efforts of the OMHV organizers. We will thoroughly examine the student responses to identify which aspects contributed to the lower scores.

Cell biology (lecture and practical session)

General student feedback	Proposed actions
In 1 of the 14 questions on Cell Biology, our average score was significantly higher than the faculty average, with a difference of more than 0.2. For the remaining 13 questions, the difference to the faculty average was also positive, but not significant.	We are pleased to see that the subject is viewed favorably by students from a number of perspectives and that we are above the faculty average in many areas. We will continue to make every effort to develop our teaching methods and to adapt the structure of the subject to the needs of the students.

Individual student opinions	Proposed actions
There was no individual opinion from the students.	As there was no individual opinion, we understand that students may have been satisfied with the course, but we would have been very grateful for any detailed suggestions or comments for improvement.

The action plan was prepared by Dr Eszter Lajkó
